BABY VANSHIKA [SHC092849]

5 Yr | Female Ph : 8368537861

Req by : Dr. GANGESH GUNJAN / DR. DHAWAL SHARMA

Token : CT651

Reg ID : IPSHC18471

Status : Finalized

Request : 22-02-2026 04:14 AM | Reported : 22-02-2026 01:51 PM

Address : A-16 , Sudamapuri, Ghaziabad, Uttar Pradesh, India

Ward : 5 / SICU / SICU

CT Scan Head Plain

Observation :

Technique: Plain CT head was performed taking 1.0mm axial sections from base of skull to vertex parallel to orbitomeatal line

Findings:

Post op case of craniotomy showing: Craniotomy done in right frontal bone.

Fracture is noted in right basifrontal bone with associated underlying hemorrhagic contusion in right frontal lobe.

Fracture is noted in medial wall of right orbit.

Fracture is also noted in left nasal bone with extension into ethmoid bone.

Minimal subarachnoid hemorrhage is noted in right frontal region.

Diffuse cerebral edema is seen.

Rest of the cerebral hemispheres are normal in attenuation.

Both lateral, 3rd & 4th ventricles are normal in size & outline. No significant shift of midline structure is seen.

Both cerebellar hemispheres are normal in attenuation.

Brain stem is normal in attenuation.

Free air is not seen in extracranial space of right frontal region.

Scalp hematoma is noted in right frontal region and right orbital region.

Incidental note is made of severe adenoid hypertrophy with maxillary & ethmoid sinusitis.

IMPRESSION:

- Fracture of right basifrontal bone with associated underlying hemorrhagic contusion.
- Fracture of medial wall of the right orbit.
- Left nasal bone fracture with extension into the ethmoid bone.
- Minimal right frontal subarachnoid hemorrhage.
- Diffuse cerebral edema.

Please correlate clinically.

X Ray both wrist AP/Lat done which showed B/L distal end radius and ulna displaced fracture. In view of finding in image and urgent need of surgical procedure. Patient attendants were informed the same and after obtaining consent patient was taken up for the-

Procedure Craniotomy with bone flap elevation + ORIF + K wire fixation done on 21.2.2016. Post operatively patient was managed in SICU on ventilator support under sedation. Patient was continued on IV antibiotics, anti-epileptic, IV fluid, analgesic, anti edema with supportive medication. Pediatrics opinion was taken and necessary modification in medication were done as advised. Ortho review was done and advice was followed.

On (22.2.2016) Post op CT brain was done and seen. RT feeds started. Ophthalmology opinion informed w/o peri-orbital edema. In view of low post operative Hb (9.4), 1 unit PRBC transfused. Patient will require further ICU monitoring and multidisciplinary team approach as being followed now. He remains under sedation and plan to stop sedation to allow morning for further neurological assessment and weaning off trial.

Present condition - On ventilator- VC mode. Under sedation, Afebrile, RR- 114/min, SpO2- 98%, BP- 108/56 mmHg
RT feed 5ml/ 4 hourly on going

Ongoing treatment- Inj. Ceftriaxone, Inj. Amikacin, Inj. Levera, Inj. Metronidazole, Pantocid, Inj. Ondansetron, Inj. PCM, Inj. Mannitol.
